Name: Jordan Whitmore

Age: 34

Location: Asheville, North Carolina

Occupation: Environmental Data Scientist

Bio:

Jordan Whitmore is a passionate environmental data scientist who has spent over a decade researching the impacts of climate change on regional water systems. She received her M.S. in Environmental Science and Policy from Stanford University and has collaborated with NOAA and the USGS on several watershed preservation initiatives.

Her recent work involves applying machine learning models to predict drought risk and inform public policy decisions across the Southeastern United States. Outside of work, Jordan is an avid hiker, amateur ceramicist, and volunteers at a local animal shelter.

Publications:

- "Machine Learning Forecasting of Regional Drought Patterns," Environmental Data Journal (2023)

- "Watershed Preservation and Predictive Analytics," Climate Policy Today (2022)
